

BioConserve

biodiversity. conservation. ecosystems.

Who we are

WE DECIPHER BIODIVERSITY, SO NATURE FITS IN NATURALLY.

BioConserve is unique in that it is a consultancy focused exclusively on biodiversity. We're not a multidisciplinary firm with an ecologist on the side, and we won't be expanding our scope into environment, sustainability or planning and design projects.

We live and breathe biodiversity. That's our edge. It means we untangle the complexity and give you clear practical steps forward.

Helping you integrate nature into your projects early and meaningfully. No box-ticking here.

"We're ecosystem interpreters— translating scientific insights for balanced decision-making." - Sonya

What we offer

**EVERY PROJECT HAS ITS OWN ECOLOGICAL LEGACY.
WE HELP YOU MAKE IT A GOOD ONE.**

Biodiversity is complicated, and we're here to decrypt it for you. That means stepping in with practical support: making sense of the science, handling the process, and adapting to changes as they arise (because they always do).

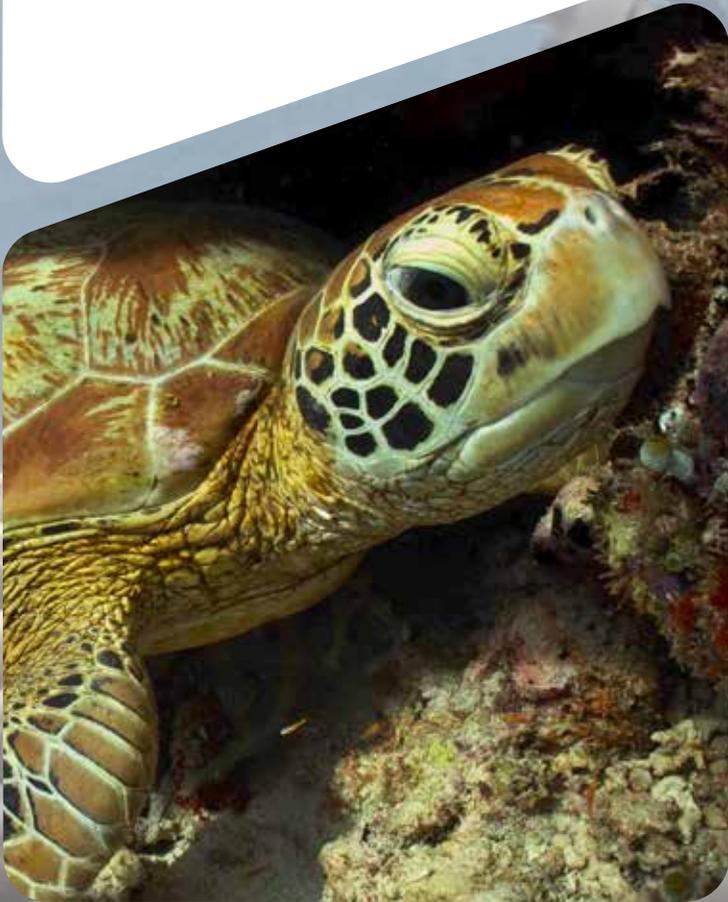

We've worked through all the usual acronyms—**IFC PS6, EBRD PR6, TNFD**—and delivered **baseline surveys, Critical Habitat Assessments, and nature-positive plans** along the way.

"We make seamless integration of biodiversity possible." - Robert

Why we're here

WE MAKE BIODIVERSITY BUSINESS AS USUAL.

We're here to help shift the lens to incorporate biodiversity into everyday decision-making.

We aim to improve the quality of ecological work, push the standards of the industry and enable a collective movement towards a truly **nature-centric society**.

Our work contributes to a range of sustainability goals: improving life on land and below water, driving the clean energy transition, and nature-based innovation. The end result? Sustainable and equitable economies.

"We're passionate about driving better decision-making, for a future in which people and nature both thrive." - Lara

OUR WORK IS CONNECTED

(JUST LIKE ECOSYSTEMS)

ECOLOGICAL STUDIES

Baseline surveys and permitting support for informed project planning.

NATURE-BASED SOLUTIONS

Integrating biodiversity into design while balancing people, place, and nature.

RENEWABLE ENERGY & CRITICAL INFRASTRUCTURE

Guiding the clean energy transition while ensuring the protection of biodiversity through lender-aligned support.

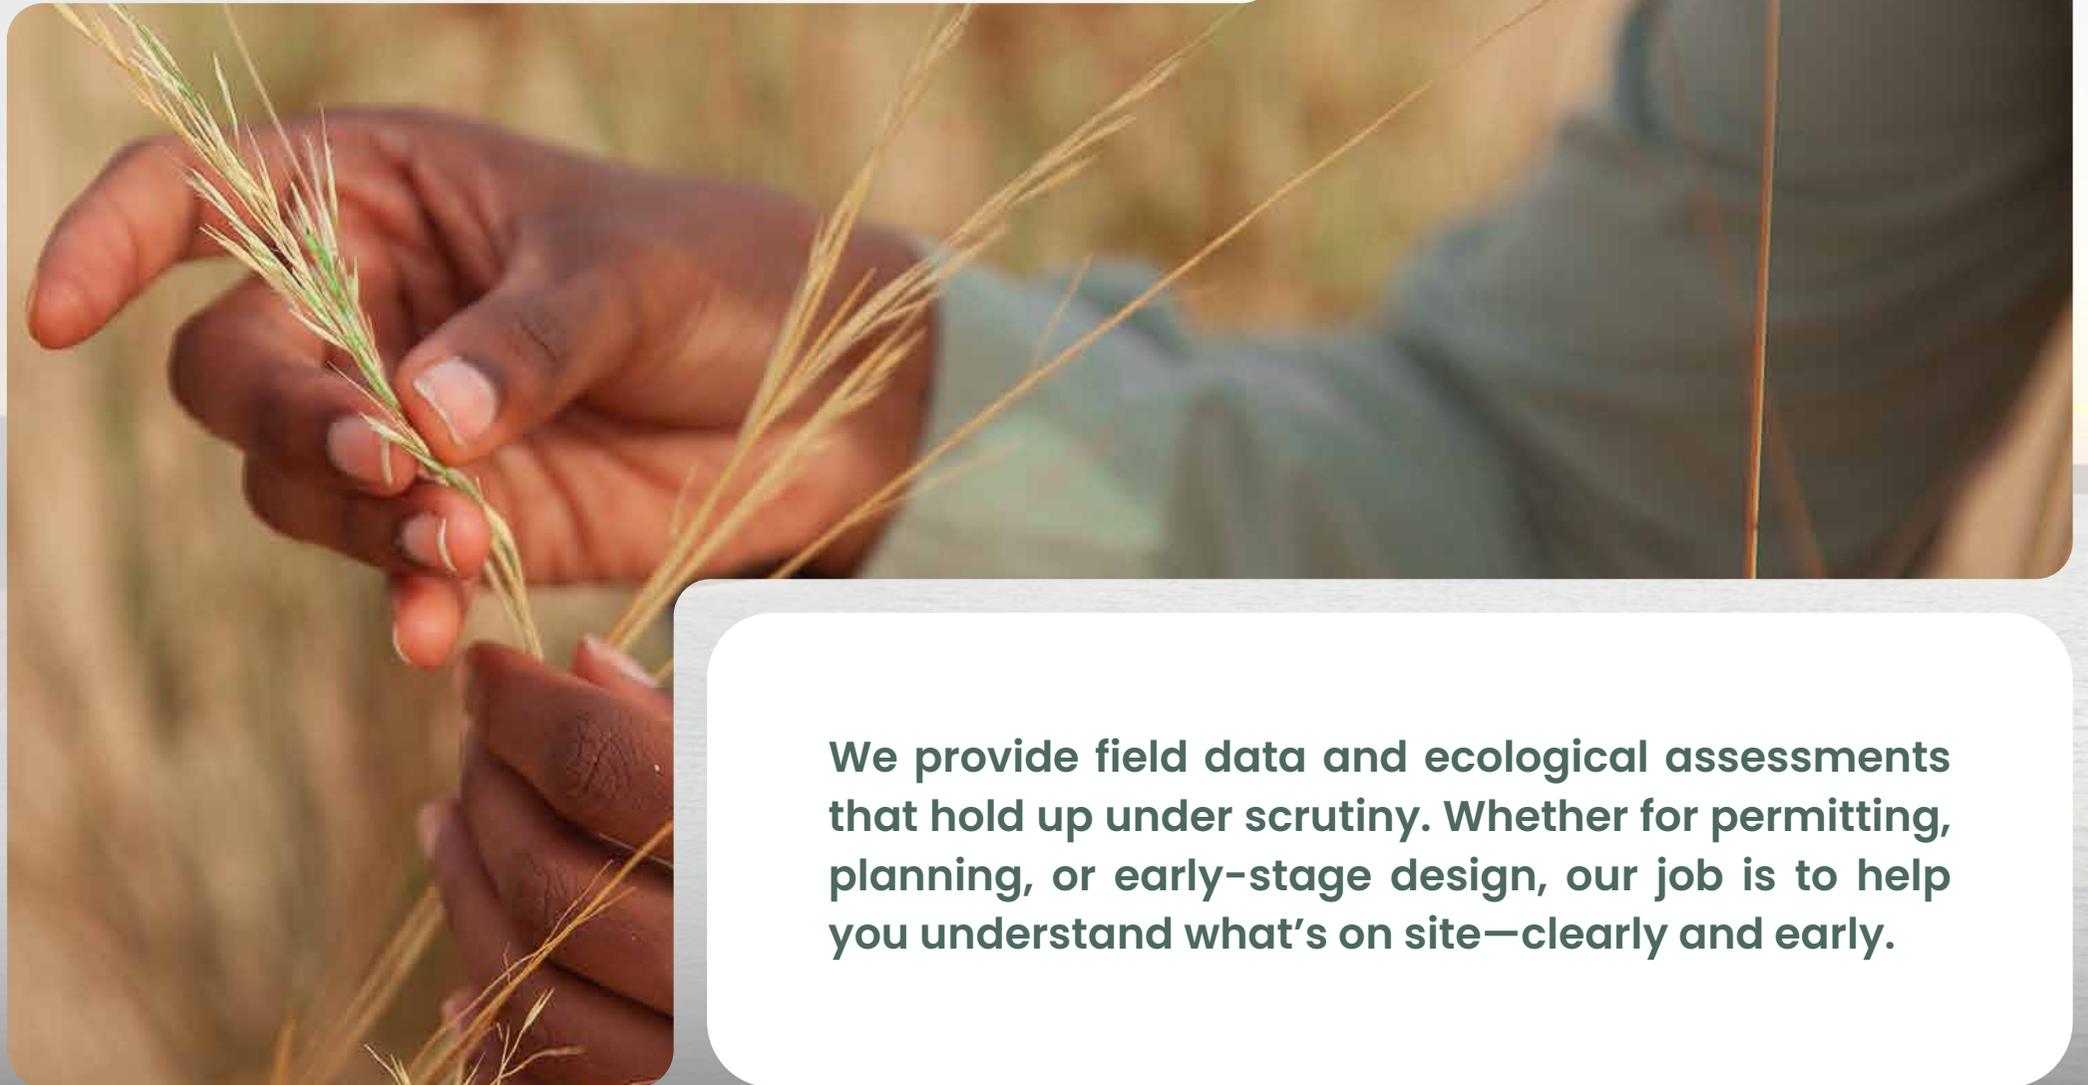

CORPORATE BIODIVERSITY STRATEGY

Aligning biodiversity with ESG goals and long-term business planning.

"We think about balance in everything we do. Between biodiversity and development, science and delivery, long-term goals and short-term constraints." - Sheril

ECOLOGICAL STUDIES

Surveys, Analysis & Assessment

We provide field data and ecological assessments that hold up under scrutiny. Whether for permitting, planning, or early-stage design, our job is to help you understand what's on site—clearly and early.

Ecological Studies

We can help with:

- Ecological surveying (e.g. wildlife & avifauna, vegetation & flora)
- Habitat and species assessments, biodiversity indices
- Site suitability analysis and feasibility studies
- Ecological Impact Assessments (EcIA)
- Biodiversity sections of Environmental Impact Assessments (EIAs)
- Ecological management plans (e.g. Reptile Relocation Plan)

We support developers, environmental consultants, and contractors in projects across the Middle East, Central Asia, and beyond.

"We develop a pragmatic approach that allows us to identify the optimum solutions." - Iqtedar

RENEWABLE ENERGY & CRITICAL INFRASTRUCTURE

We support renewable energy and infrastructure projects with the ecological input needed for permitting and compliance.

Whether you're working on a wind farm development project or conducting due diligence for a lender, our job is to get the biodiversity side of things right.

Renewable Energy

We can help with:

- Critical Habitat Assessments (CHA)
- Biodiversity inputs for Environmental Social Impact Assessments (ESIAs)
- Collision Risk Modelling (CRM)
- Biodiversity Management and Action Plans (BMP, BAP)
- Biodiversity Monitoring and Evaluation Program (BMEP)
- Alignment with IFC PS6, EBRD PR6, and Equator Principles

In addition to developers and contractors, we also support Development Financial Institutions (DFIs) as well as Lender Environmental and Social Advisors (LESAs).

“We pave the road to a future driven by renewable energy without the untenable cost of biodiversity loss.” - Sonya

NATURE-BASED SOLUTIONS

Ecological Design Advisory

The background of the slide is a composite image. It features a semi-transparent architectural plan overlaid on a natural landscape. The architectural plan is a complex, organic network of paths, roads, and water bodies, resembling a natural drainage system or a park layout. The paths are light gray, and the water bodies are darker gray. The natural landscape is a lush green valley with a river winding through it, under a blue sky with white clouds. The overall aesthetic is one of integrating nature with human-made structures.

We help project teams balance development with conservation by considering nature from the start. It's about incorporating ecological functions into the design of solutions that address societal needs.

Nature-based Solutions

We can help with:

- Early stage feasibility studies for visioning and master planning
- Design of wildlife-conscious infrastructure and crossings
- Green and blue infrastructure
- Ecologically responsive design
- Habitat restoration management and monitoring
- Biodiversity credit applications for sustainability certification systems (e.g. LEED and BREEAM)
- Nature-positive and net gain outcomes

We support architects, urban planners, landscape designers, and sustainability practitioners in applying nature-based solutions.

"We don't prioritize nature above all else. We make it fit into the real world." - Selam

CORPORATE BIODIVERSITY STRATEGY DEVELOPMENT

We help sustainability and ESG teams make sense of how biodiversity fits into their business.

That means understanding where the risks are, what's material, and what a nature-positive approach actually looks like inside a company—not just on paper.

Corporate Biodiversity

We can help with:

- Biodiversity risk, asset, and materiality assessments
- Development of policies aligned with TNFD
- Strategic frameworks that achieve nature-positive targets
- Biodiversity monitoring, disclosures and reporting

We support corporate sustainability and ESG teams with biodiversity strategies integrated into CSR and sustainability programs. We have cross-sector experience—ranging from manufacturing to logistics.

“Biodiversity is crucial to the quality of human existence, and in extension, to the longevity of our businesses.” - Nourhane
